Temperature & Altitude Derate

1. Determine derate multiplier vs. temperature and altitude in Table A depending upon your operating condition.
2. Assumes the LT return temperature is 10°C above the air filter inlet with a maximum LT temperature of 50°C.
3. If the LT temperature exceeds 50°C, consult factory for recommendations.
4. Altitude is based upon SAE standard ambient pressure vs. altitude. For low barometric conditions add 150m (500 ft) to site altitude.

LT & HT Circuit Heat Rejection Calculation

- Determine derate multiplier vs. temperature derate per above.
- Using the multiplier from #1 above as the percent load factor determine the Heat rejection from the previous page.
- From Table B find the HT and LT circuit multiplier.
- Multiply the result of step 2 by the result of step 3 to obtain the heat rejection at your altitude and temperature.
